A CRM APPLICATION FOR THE CHAI SHOP & CO

2. REQUIREMENT ANALYSIS PHASE

2.1 Introduction

Requirement analysis identifies what the proposed CRM must do. The requirements are divided into functional and non-functional requirements.

A CRM generally centralizes customer and prospect information and can support interaction tracking, sales activities, customer service, and reporting.

Possible fields include:

2.2 Customer Registration

The system shall allow employees to register Customer ID

- Name
- Mobile number
- Email address
- Date of birth, if voluntarily provided
- Preferred communication channel
- Preferred chai/product
- Registration date
- Loyalty status

The system should validate important fields to prevent incorrect or duplicate records.

2.3 Customer Profile

Each customer should have a profile containing relevant information.

The profile may display:

- Basic information
- Previous orders
- Total visits

- Loyalty points
- Rewards
- Feedback
- Complaints
- Offers received
- Interaction history

2.4 Customer Search

Employees should be able to search customers using:

- Customer ID
- Name
- Mobile number
- Email

Search results should be displayed clearly.

2.5 Order Management

The CRM should record customer transactions.

An order record may include:

- Order ID
- Customer ID
- Date
- Products
- Quantity
- Price
- Total amount
- Payment status
- Order type.

2.6 Loyalty Management

A loyalty module can encourage repeat engagement through a transparent rewards program.

Example:

₹100 eligible purchase = 10 loyalty points

The actual conversion rate can be configured by the administrator.

Functions include:

- Add points
- Viewpoints
- Redeem points
- Expire points according to business rules
- View redemption history
- Create rewards

Example rewards:

- Free chai
- Snack discount
- Combo discount
- Special promotional coupon

2.7 Offer Management

The administrator should be able to create offers.

An offer may include:

- Offer name
- Description
- Start date
- End date
- Discount/reward
- Eligible customer group
- Terms and conditions

The CRM can support targeted communication by organizing customers into segments Centralized customer data can help businesses personalize customer communication.

2.8 Feedback Management

Customers should be able to provide feedback.

Feedback may include:

- Customer ID
- Order ID
- Rating
- Comment
- Date
- Category
- Status

Feedback categories may include:

- Product quality
- Taste
- Service
- Cleanliness
- Waiting time
- Pricing
- Staff behaviour

2.9 Complaint Management

Complaints should be assigned a status:

New → Assigned → In Progress → Resolved → Closed

The employee handling a complaint should be able to add notes.

2.10 Reporting

The system should provide reports such as:

- Total customers
- New customers
- Active customers
- Repeat customers
- Orders
- Popular products
- Loyalty points issued
- Loyalty points redeemed
- Feedback summary
- Complaints
- Campaign performance

Dashboards and analytics are common CRM capabilities for monitoring business information.

2.11 Security

Only authorized users should access administrative functions.

Possible roles:

Administrator

- Complete system access

Manager

- Customer reports
- Campaign management
- Feedback management

Staff

- Customer search
- Customer registration
- Order/interaction entry

2.12 Usability

The interface should be:

- Simple
- Clear
- Responsive
- Easy to navigate
- Suitable for quick data entry

2.13 Performance

The application should respond quickly for normal operations such as customer search, profile retrieval, and order entry.

2.14 Reliability

The system should maintain consistent records and provide suitable backup mechanism.
