A CRM APPLICATION FOR THE CHAI SHOP & CO

5. PROJECT DEVELOPMENT PHASE

5.1 Introduction

The development phase converts the approved design into a working application.

One possible technology stack is:

Frontend: HTML, CSS, JavaScript / React

Backend: Node.js with Express / Python Django / PHP Laravel

Database: MySQL / PostgreSQL

Authentication: Session or token-based authentication

Hosting: Cloud or local server

The exact technology can be changed according to the academic requirements.

5.2 Development Modules

The application can be divided into:

1. Authentication
2. Customer Management
3. Product Management
4. Order Management
5. Loyalty Management
6. Feedback Management
7. Complaint Management
8. Campaign Management
9. Reports
10. Administration

5.3 Customer Module

The customer module is the central part of the CRM.

Functions:

- Add customer
- Edit customer
- View customer
- Search customer
- Deactivate customer
- View interaction history

5.4 Customer Profile

A profile can contain:

Personal Information

Name
Mobile
Email

Business Information

First visit
Last visit
Total visits
Purchase history

Relationship Information

Preferences
Loyalty points
Feedback
Complaints
Offers

5.5 Order Module

The order module records purchases.

Example:

Customer: Customer 1001
Order: an defects, regression testing should be performed to ensure that modifications have not introduced new problems Masala Chai × 2
Snack: Samosa × 2
Order Type: Takeaway
Total: ₹___
Date: ___

After order completion, the system can trigger the loyalty calculation.

5.6 Loyalty Module

The loyalty system maintains points.

Example business rule:

Eligible Amount = ₹250

Point Rate = 1 point for every ₹10

Points Earned = 25

The administrator should be able to modify the point rules.

5.7 Feedback Module

Customers can provide ratings and comments.

Example:

Rating:5/5
Category: Product Quality
Comment: “The ginger chai was very good.”

Employees can review feedback through the dashboard.

5.8 Campaign Module

Campaigns can be created for selected customer groups.

Examples:

- New customer offer
- Weekend offer
- Student offer
- Loyalty-member offer
- Festival promotion
- Returning-customer offer

The system should record campaign status and dates.

5.9 Reporting Module

Reports may include:

Customer Report

- New customers
- Active customers
- Returning customers

Sales Report

- Orders
- Revenue-related records
- Product quantities

Loyalty Report

- Points earned
- Points redeemed
- Active rewards

Feedback Report

- Number of feedback entries
- Ratings

5.10 Security

Security features should include:

- Password protection
- Role-based access
- Input validation
- Secure database queries
- Session management
- Logout
- Backup

5.11 Development Outcome

At the end of development, an integrated prototype should be available for testing.
