A CRM APPLICATION FOR THE CHAI SHOP & CO

7.PROJECT DOCUMENTATION PHASE

7.1 Importance of Documentation

Documentation provides a permanent record of the project.

It explains:

- Why the system was developed.
- What problems it solves.
- How it was designed.
- How it was implemented.
- How it was tested.
- How users should operate it.

7.2 Types of Documentation

The project documentation includes:

Project Report
Describes the complete project.

Software Requirements Specification
Describes system requirements.

Technical Documentation
Describes architecture, database, and implementation.

User Manual
Explains how employees use the application.

Testing Documentation
Contains test cases and results.

7.3 Login

1. Open the application.
2. Enter username.
3. Enter password.
4. Click Login.
5. Dashboard appears.

7.4 Add Customer

1. Open Customers.
2. Select Add Customer.
3. Enter required details.
4. Validate information.
5. Click Save.
6. Customer ID is generated.

7.5 Search Customer

1. Open Customer Search.
2. Enter name/mobile/customer ID.
3. Click Search.
4. Select customer.
5. View profile.

7.6 Record Feedback

1. Open Feedback.
2. Select customer.
3. Select order if applicable.
4. Enter rating.

5. Enter comment.
6. Save.

7.7 User Management

The administrator can:

- Add employees.
- Assign roles.
- Disable accounts.
- Reset credentials.
- Review user activity.

7.8 Product Management

Administrators can:

- Add products.
- Edit products.
- Update prices.
- Activate/deactivate products.

7.9 Campaign Management

The administrator can:

1. Create campaign.
2. Select target segment.
3. Define offer.
4. Set dates.
5. Activate campaign.
6. Monitor results.

7.10 Report Management

Reports can be filtered by:

- Date
- Customer
- Product
- Campaign
- Feedback category

Reports should be exportable where required.

7.11 Maintenance

After deployment, the system requires:

- Database backup
- Security updates
- Bug fixes
- Performance monitoring
- User support

7.12 Backup

Regular backups should protect against accidental deletion or system failure.

A backup strategy can include:

Daily → Incremental Backup

Weekly → Full Backup

The exact schedule should be based on the deployment environment.

7.13 Future Enhancements

Possible future features include:

- Mobile application
- WhatsApp integration
- Online ordering
- QR-based loyalty
- Digital receipts
- Customer self-service
- Advanced analytics
- Multiple shop branches
- Inventory integration
- Payment integration

CRM integrations can connect customer information with other business systems and improve data consistency when properly designed.
