A CRM APPLICATION FOR THE CHAI SHOP & CO

8. PROJECT DEMONSTRATION PHASE

8.1 Introduction

The Project Demonstration Phase is the final stage in which the completed CRM Application for The Chai Shop & Co. is presented to the project guide, evaluators, or intended users. This phase demonstrates that the planned system has been successfully developed and tested.

The demonstration explains both the functional and practical aspects of the application. Instead of only discussing the theoretical concepts, the project team shows the actual working of the system using suitable sample data.

8.2 Preparation for Demonstration

Before the demonstration, the application is checked carefully. The database connection, login, forms, navigation, customer records, search features, and other important modules are tested.

Preparation activities include:

- Checking the application.
- Preparing sample data.
- Checking database connectivity.
- Preparing project presentation slides.
- Collecting important screenshots.
- Checking the demonstration environment.
- Reviewing the project report.
- Preparing explanations for each module.

8.3 Introduction of the Application

The demonstration begins with the project title and a brief explanation of the problem addressed by the application. The project team explains why CRM is useful for The Chai Shop & Co. and how the application provides a centralized platform for managing customer-related information.

8.4 Login Demonstration

The login page is demonstrated first. The user enters the required credentials and accesses the application.

This demonstrates the basic access-control mechanism of the system.

8.5 Dashboard Demonstration

After login, the dashboard is displayed. The dashboard provides access to the major modules of the CRM application.

The project team explains the purpose of each option and demonstrates how users can move between different sections.

8.6 Customer Management Demonstration

The customer management module is one of the most important parts of the demonstration. A sample customer is added to the system, and the entered information is stored in the database.

The demonstration can include:

- Adding a customer.
- Viewing customer information.
- Searching for a customer.
- Updating customer information.
- Viewing customer records.
- Managing customer-related information.

8.7 Feedback and Interaction Demonstration

The feedback and interaction functionality is demonstrated by entering suitable sample information. The project team explains how the system can help maintain customer communication and feedback in an organized manner.

This demonstrates the CRM purpose of the application beyond simple data storage.

8.8 Search and Reports

The search functionality is demonstrated by searching for a particular customer. The system retrieves the relevant record from the database.

If reporting functionality is included, the project team also demonstrates how customer-related information can be viewed through reports or dashboard summaries.

8.9 Real-World Scenario

A simple real-world scenario can be used during the presentation. For example, a new customer visits The Chai Shop & Co. The staff member registers the customer in the CRM system. During a later visit, the customer can be searched using their existing information.

If the customer provides feedback, the staff member can record it. If contact information changes, the existing record can be updated.

This scenario demonstrates how the application can be used during normal business activities.

8.10 Feedback from Demonstration

After the application is demonstrated, feedback can be collected from the project guide or evaluators. Suggestions may relate to interface design, functionality, navigation, reports, or future improvements.

The feedback can be reviewed and appropriate changes can be considered before the final submission.

8.11 Future Enhancements

Possible future improvements include:

- Mobile application support.
- Online ordering integration.
- Customer loyalty features.
- Automated notifications.
- Advanced reports.
- Improved analytics.
- Digital feedback collection.

- Personalized customer offers.
- Cloud-based CRM access.
- Integration with payment systems.

8.12 Conclusion

The Project Demonstration Phase completes the development process of the CRM Application for The Chai Shop & Co. It provides an opportunity to demonstrate the actual working of the application and explain how the developed system addresses the identified customer relationship requirements.
